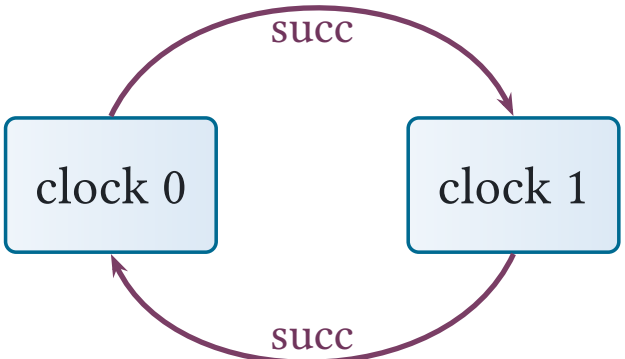
(a) the clock advances on each return



an exit leaves
the clock as it is

(b) the exits of the flip, grouped by the clock

$k = 0, 2, 4, \ldots$ returns

clock 0 $\left(\frac{3}{5} - \frac{48}{125} - \cdots\right)\mathrm{X}\psi \rightarrow \mathbf{0}$

$k = 1, 3, 5, \ldots$ returns

clock 1 $\left(-\frac{16}{25} - \frac{144}{625} - \cdots\right)\psi \rightarrow -\psi$
