(a) a live vector is the tape of everything it will emit

weights $\frac{16}{25} \cdot (9/25)^j$,
adding to $\|w\|^2 = 1$

(b) one round

the tape moves one cell,
$\mathcal{O}D_1 = \mathcal{S}\mathcal{O}$

(c) a dead vector

$Bv = 0$, $Dv = -v$ and $\langle v, Cu \rangle = 0$:
it emits nothing and receives nothing
