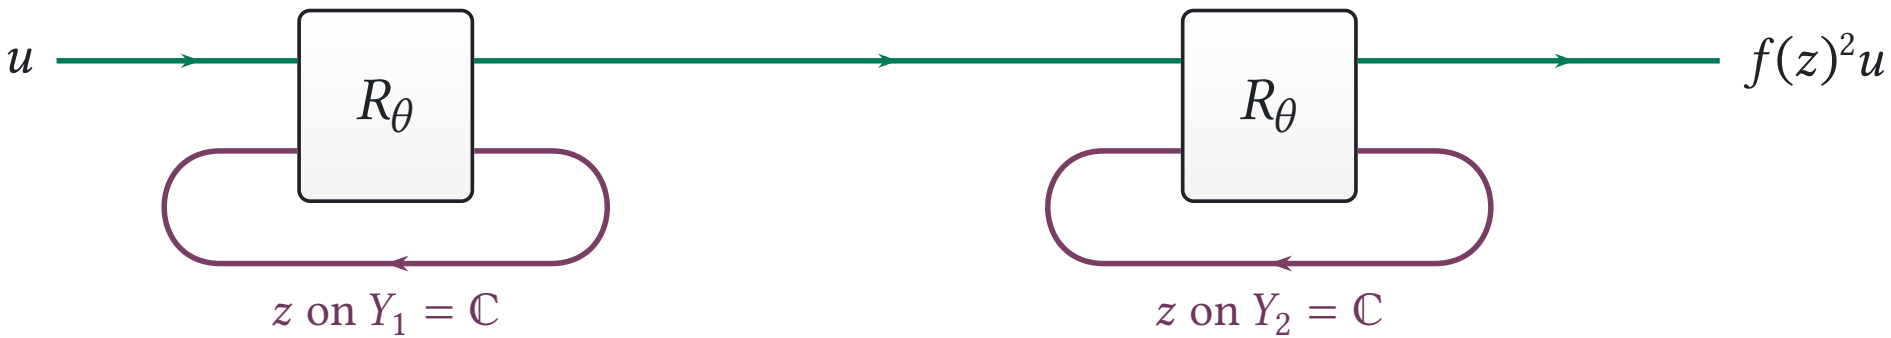
Two copies of the scalar rotation, $t = 3/5$, $s = 4/5$



$$f(z) = \frac{t - z}{1 - tz}, \qquad f(1)^2 = 1$$

$$W = \begin{pmatrix} 9/25 & -12/25 & -4/5 \\ 4/5 & 3/5 & 0 \\ 12/25 & -16/25 & 3/5 \end{pmatrix}$$

The same cascade as one body on $\mathbb{C} \oplus (Y_1 \oplus Y_2)$.
Its external-first blocks give $\Theta_W(z) = f(z)^2$.
